---

#### *** Section 2 - Hazards Identification ***

**EMERGENCY OVERVIEW**

Solid, coil or sheet. Various colors. Odorless. Non-combustible as supplied. Small chips, fine turning and dust from processing may be readily ignitable.  
Explosion/fire hazards may be present when (See Sections 5, 7 and 10 for additional information):

* Dust or fines are dispersed in the air.  
* Chips, dust or fines are in contact with water.  
* Dust or fines are in contact with certain metal oxides (e.g. rust).  
* Molten metal is in contact with water/moisture or certain metal oxides.

Dust and fume from processing can cause irritation of eyes, skin and upper respiratory tract and metal fume fever. Combustion of the coatings can generate toxic and irritating gases.

**POTENTIAL HEALTH EFFECTS**

The following statements summarize the health effects generally expected in cases of overexposures. User specific situations should be assessed by a qualified individual. Additional health information can be found in Section 11.

The health effects listed below are not likely to occur unless processing of this product generates dust or fumes.

**Eyes**  
Dust or fume from processing: Can cause irritation.  

**Skin**  
Dust or fume from processing: Can cause irritation.  

**Inhalation**

Health effects from mechanical processing (e.g., cutting, grinding): Can cause irritation of upper respiratory tract.  
**Chronic overexposures:** Can cause scarring of the lungs (pulmonary fibrosis), central nervous system damage, secondary Parkinson's disease and reproductive harm.  
Additional health effects from elevated temperature processing (e.g., welding, melting): **Acute overexposures:** Can cause the accumulation of fluid in the lungs (pulmonary edema) severe irritation of the respiratory tract, nausea, fever, chills, shortness of breath and malaise (metal fume fever).  
**Chronic overexposures:** Can cause respiratory sensitization, the accumulation of fluid in the lungs (pulmonary edema), lung cancer and kidney damage. Effects can be delayed up to 24 hours.
Carcinogenicity and Reproductive Hazard

Product as shipped: Does not present any cancer or reproductive hazards..
Dust and fumes from mechanical processing: Can present a cancer hazard (lead). Can present a reproductive hazard (lead, manganese).
Dust and fumes from welding or elevated temperature processing: Can present a cancer hazard (lead compounds, hexavalent chromium compounds, welding fumes). Can present a reproductive hazard (lead, manganese).

Medical Conditions Aggravated By Exposure to Product, Components or Compounds Formed During Processing

Dust or fume from processing: Asthma, chronic lung disease, skin rashes and secondary Parkinson’s disease.

*** Section 3 - Composition / Information on Ingredients ***

Complete composition is provided below and may include some components classified as non-hazardous.

Component Related Regulatory Information

Some component information may be found under the following: Lead.

Component Information

* Coatings include vinyl, epoxy, polyester, siliconized polyester, acrylic, fluorocarbons, polyurethane, petrolatum, chromium conversion and titanium conversion. Some coatings contain lead pigments.

Additional compounds which may be formed during processing or recycling are listed in Section 8.

*** Section 4 - First Aid Measures ***

First Aid: Eyes

Dust or fume from processing: Flush eyes with plenty of water or saline for at least 15 minutes. Consult a physician.

First Aid: Skin

Dust or fume from processing: Wash skin with soap and water for at least 15 minutes. Consult a physician if irritation persists.

First Aid: Inhalation

Dust or fume from processing: Remove to fresh air. If unconscious or severely injured, check for clear airway, breathing and presence of pulse. Perform CPR if there is no pulse or respiration. Consult a physician.

*** Section 5 - Fire Fighting Measures ***

Flammable/Combustible Properties

This product does not present fire or explosion hazards as shipped. Small chips, turnings, dust and fines from processing may be readily ignitable.

Fire/Explosion

May be a potential hazard under the following conditions:

* Dust or fines dispersed in the air can be explosive. Even a minor dust cloud can explode violently. Dust accumulation on the floor, ledges and beams can present a risk of ignition, flame propagation and secondary explosions.
* Chips, dust or fines in contact with water can generate flammable/explosive hydrogen gas. Hydrogen gas could present an explosion hazard in confined or poorly ventilated spaces.
* Dust or fines in contact with certain metal oxides (e.g., rust). A thermite reaction, with considerable heat generation, can be initiated by a weak ignition source.
* Molten metal in contact with water/moisture or other metal oxides (e.g., rust, copper oxide). Moisture entrapped by molten metal can be explosive. Contact of molten aluminum with other metal oxides can initiate a thermite reaction. Finely divided metals (e.g., powders or wire) may have enough surface oxide to produce thermite reactions/explosions.

**Extinguishing Media**

Use Class D extinguishing agents on dusts, fines or molten metal. Use coarse water spray on chips and turnings.

**Unsuitable Extinguishing Media**

**DO NOT USE:**
* Halogenated agents on small chips, dusts or fines.
* Water around molten metal.

These agents will react with the burning material.

**Fire Fighting Equipment/Instructions**

Fire fighters should wear NIOSH approved, positive pressure, self-contained breathing apparatus and full protective clothing when appropriate.

*** Section 6 - Accidental Release Measures ***

**Small/Large Spill**

Collect scrap for recycling. If molten: Contain the flow using dry sand or salt flux as a dam. Do not use shovels or hand tools to halt the flow of molten aluminum. Allow the spill to cool before remelting as scrap.

*** Section 7 - Handling and Storage ***

**Handling/Storage**

Avoid generating dust. Avoid contact with sharp edges or heated metal. Hot and cold aluminum are not visually different. Hot aluminum does not necessarily glow red.

**Requirements for Processes Which Generate Dusts or Fines**

If processing of these products includes operations where dust or extremely fine particulate is generated, obtain and follow the safety procedures and equipment guides contained in Aluminum Association Bulletin F-1 and National Fire Protection Association (NFPA) brochures listed in Section 16. Cover and reseal partially empty containers. Use non-sparking handling equipment. Provide grounding and bonding where necessary to prevent accumulation of static charges during dust handling and transfer operations. (See Section 15).

Local ventilation and vacuum systems must be designed to handle explosive dusts. Dry vacuums and electrostatic precipitators must not be used. Dust collection systems must be dedicated to aluminum dust only and should be clearly labeled as such. Do not co-mingle fines of aluminum with fines of iron, iron oxide (rust) or other metal oxides.

Do not allow chips, fines or dust to contact water, particularly in enclosed areas.

Avoid all ignition sources. Good housekeeping practices must be maintained. Do not use compressed air to remove settled material from floors, beams or equipment.

**Requirements for Remelting of Scrap Material and/or Ingot**

Molten metal and water can be an explosive combination. The risk is greatest when there is sufficient molten metal to entrap or seal off the water. Water and other forms of contamination on or contained in scrap or remelt ingot are known to have caused explosions in melting operations. While the products may have minimal surface roughness and internal voids, there remains the possibility of moisture contamination or entrapment. If confined, even a few drops of water can lead to violent explosions.

All tooling and containers which come in contact with molten metal must be preheated or specially coated and rust free. Molds and ladles must be preheated or oiled prior to casting. Any surfaces that may contact molten metal (e.g., concrete) should be specially coated.
Drops of molten metal in water (e.g. from plasma arc cutting), while not normally an explosion hazard, can generate enough flammable hydrogen gas to present an explosion hazard. Vigorous circulation of the water and removal of the particles minimize the hazards.

During melting operations, the following minimum guidelines should be observed:
* Inspect all materials prior to furnace charging and completely remove surface contamination such as water, ice, snow, deposits of grease and oil or other surface contamination resulting from weather exposure, shipment, or storage.
* Store materials in dry, heated areas with any cracks or cavities pointed downwards.
* Preheat and dry large or heavy items such as ingot adequately before charging into a furnace containing molten metal. This is typically done by use of a drying oven or homogenizing furnace. The drying cycle should bring the internal metal temperature of the coldest item of the batch to 400°F and then hold at that temperature for 6 hours.

### *** Section 8 - Exposure Controls / Personal Protection ***

**Engineering Controls**

If dust or fumes are generated through processing: Use with adequate explosion-proof ventilation to meet the limits listed in Section 8, Exposure Guidelines.

**Personal Protective Equipment**

**Respiratory Protection**

If dust or fumes are generated through processing: Use NIOSH-approved respiratory protection as specified by an Industrial Hygienist or other qualified professional if concentrations exceed the limits listed in Section 8, Exposure Guidelines. Suggested respiratory protection: N100, acid gas cartridge if hydrogen chloride or hydrogen fluoride are generated.

**Eye Protection**

Wear safety glasses/goggles to avoid eye injury.

**Skin Protection**

Wear appropriate gloves to avoid any skin injury.

**General**

Sampling to establish lead exposures is advised where exposures to airborne particulate or fumes are possible. Consult OSHA Lead Standard 29 CFR 1910.1025 for specific health/industrial hygiene precautions and requirements to follow when handling lead compounds.

Personnel who handle and work with molten metal should utilize primary protective clothing like polycarbonate face shields, fire resistant tapper's jackets, neck shades (snoods), leggings, spats and similar equipment to prevent burn injuries. In addition to primary protection, secondary or day-to-day work clothing that is fire resistant and sheds metal splash is recommended for use with molten metal. Synthetic materials should never be worn even as secondary clothing (undergarments).

**Exposure Guidelines**

**A: General Product Information**

Alcoa recommends an Occupational Exposure Limit for Chromium (VI) Compounds [both soluble and insoluble forms] of 0.25 ug/m3 TWA as chromium.

Alcoa recommends Occupational Exposure Limits for Manganese of 0.05 mg/m3 TWA (total particulate) and 0.02 mg/m3 TWA (respirable fraction).

Alcoa recommends an Occupational Exposure Limit for Hydrogen Fluoride of 0.5 mg/m3 TWA and 4.9 mg/m3 STEL.

**B: Component Exposure Limits**

**Aluminum** (7429-90-5)

- ACGIH 1 mg/m3 TWA (respirable fraction)
- OSHA 15 mg/m3 TWA (total dust); 5 mg/m3 TWA (respirable fraction)

**Manganese** (7439-96-5)

- ACGIH 0.2 mg/m3 TWA
- OSHA 5 mg/m3 Ceiling (fume)

**Silicon** (7440-21-3)

- OSHA 15 mg/m3 TWA (total dust); 5 mg/m3 TWA (respirable fraction)
Chromium (7440-47-3)
ACGIH 0.5 mg/m3 TWA
OSHA 1 mg/m3 TWA

Lead pigments (Not Available)
ACGIH 0.05 mg/m3 TWA (related to Lead)
OSHA 50 µg/m3 TWA (as Pb); 30 µg/m3 Action Level (as Pb, Poison - see 29 CFR 1910.1025) (related to Lead)

C: Exposure Limits for Additional Compounds Which May Be Formed During Processing

Alumina (non-fibrous) (1344-28-1)
ACGIH 1 mg/m3 TWA (respirable fraction) (related to Aluminum insoluble compounds)
OSHA 15 mg/m3 TWA (total dust); 5 mg/m3 TWA (respirable fraction)

Magnesium oxide fume (1309-48-4)
ACGIH 10 mg/m3 TWA (inhalable fraction)
OSHA 15 mg/m3 TWA (total particulate)

Manganese compounds, inorganic (Not Available)
ACGIH 0.2 mg/m3 TWA (as Mn)
OSHA 5 mg/m3 Ceiling (as Mn)

Iron oxide (1309-37-1)
ACGIH 5 mg/m3 TWA (respirable fraction)
OSHA 10 mg/m3 TWA

Chromium (II) compounds (Not Available)
OSHA 0.5 mg/m3 TWA (as Cr)

Chromium (III) compounds (as Cr) (Not Available)
ACGIH 0.5 mg/m3 TWA (as Cr)
OSHA 0.5 mg/m3 TWA (as Cr)

Chromium (VI) compounds- water soluble (Not Available)
ACGIH 0.05 mg/m3 TWA (as Cr)

Chromium (VI) compounds (certain water insoluble forms) (Not Available)
ACGIH 0.01 mg/m3 TWA (as Cr)
OSHA 2.5 µg/m3 Action Level (as Cr); 5 µg/m3 TWA (as Cr, Cancer hazard - See 29 CFR 1910.1026)

Chromium (VI) (18540-29-9)
OSHA 2.5 µg/m3 Action Level; 5 µg/m3 TWA (Cancer hazard - See 29 CFR 1910.1026)

Ozone (10028-15-6)
ACGIH 0.05 ppm TWA (heavy work); 0.08 ppm TWA (moderate work); 0.10 ppm TWA (light work); 0.20 ppm TWA (heavy, moderate or light workloads, <=2 hours)
OSHA 0.1 ppm TWA; 0.2 mg/m3 TWA

Hydrogen chloride (7647-01-0)
ACGIH 2 ppm Ceiling
OSHA 5 ppm Ceiling; 7 mg/m3 Ceiling

Hydrogen fluoride (7664-39-3)
ACGIH 0.5 ppm TWA (as F)
ACGIH 2 ppm Ceiling (as F)
ACGIH Skin - potential significant contribution to overall exposure by the cutaneous route
OSHA 3 ppm TWA

*** Section 10 - Chemical Stability & Reactivity Information ***

Stability
Stable under normal conditions of use, storage, and transportation as shipped.

Conditions to Avoid
Chips, fines, dust and molten metal are considerably more reactive with the following:
* **Water**: Slowly generates flammable/explosive hydrogen gas and heat. Generation rate is greatly increased with smaller particles (e.g., fines and dusts). Molten metal can react violently/explosively with water or moisture, particularly when the water is entrapped.
* **Heat**: Oxidizes at a rate dependent upon temperature and particle size.
* **Strong oxidizers**: Violent reaction with considerable heat generation. Can react explosively with nitrates (e.g., ammonium nitrate and fertilizers containing nitrate) particularly when heated or molten.
* **Acids and alkalis**: Reacts to generate flammable/explosive hydrogen gas. Generation rate is greatly increased with smaller particles (e.g., fines and dusts).
* **Halogenated compounds**: Many halogenated hydrocarbons, including halogenated fire extinguishing agents, can react violently with finely divided aluminum.
* **Iron oxide (rust) and other metal oxides (e.g., copper and lead oxides)**: A violent thermite reaction generating considerable heat can occur. Reaction with aluminum fines and dusts requires only very weak ignition sources for initiation. Molten aluminum can react violently with iron oxide without external ignition source.
* **Iron powder and water**: An explosive reaction forming hydrogen gas occurs when heated above 1470°F (800°C). Thermite explosions have been reported when aluminum alloys were melted in furnaces used for alloying with lead, bismuth or other metals with low melting temperatures. These metals, when added as high purity ingots, can seep through cracks in furnace liners and become oxidized. During subsequent melts in the furnace, molten aluminum can contact these metal oxides resulting in a thermite explosion.

Hazardous Decomposition
Combustion products of coatings include lead compounds, carbon monoxide, carbon dioxide, hydrogen chloride, chlorinated hydrocarbons and partially oxidized hydrocarbons.

*** Section 11 - Toxicological Information ***

Health Effects Associated with Individual Ingredients

**Lead dust or fume** Can cause irritation of eyes and upper respiratory tract. **Acute overexposures**: Can cause nausea and muscle cramps. **Chronic overexposures**: Can cause weakness in the extremities (peripheral neuropathy), abdominal cramps and other gastrointestinal tract effects, kidney damage, liver damage, central nervous system damage, damage to blood forming organs, blood cell damage and reproductive harm. Can cause reduced fertility and fetal toxicity in pregnant women. **IARC/NTP**: Listed as "reasonably anticipated to be a human carcinogen" by the NTP. Listed as possibly carcinogenic to humans by IARC (Group 2B)*.

**Manganese dust or fumes** **Chronic overexposures**: Can cause inflammation of the lung tissue, scarring of the lungs (pulmonary fibrosis), central nervous system damage, secondary Parkinson's disease and reproductive harm in males.

**Chromium dust and mist** Can cause irritation of eyes, skin and respiratory tract. **Chromium and trivalent chromium** **IARC/NTP**: Listed as "unclassifiable as to carcinogenicity in humans" by IARC (Group 3).
Silicon, inert dusts  Chronic overexposures: Can cause chronic bronchitis and narrowing of the airways.

Aluminum dust, fines and fumes  Low health risk by inhalation. Generally considered to be biologically inert (milling, cutting, grinding).

Health Effects Associated with Individual Compounds Formed During Processing
(The following could be expected if welded, remelted or otherwise processed at elevated temperatures.)

Hexavalent chromium (Chrome VI)  Can cause irritation of eyes, skin and respiratory tract. Skin contact: Can cause irritant dermatitis, allergic reactions and skin ulcers. Chronic overexposures: Can cause perforation of the nasal septum, respiratory sensitization, asthma, the accumulation of fluid in the lungs (pulmonary edema), lung damage, kidney damage, lung cancer, nasal cancer and cancer of the gastrointestinal tract. IARC/NTP: Listed as "known to be a human carcinogen" by the NTP. Listed as carcinogenic to humans by IARC (Group 1)*.

Magnesium oxide fumes  Can cause irritation of eyes and respiratory tract. Acute overexposures: Can cause nausea, fever, chills, shortness of breath and malaise (metal fume fever).

Manganese oxide fumes  Can cause irritation of eyes, skin and respiratory tract. Acute overexposures: Can cause nausea, fever, chills, shortness of breath and malaise (metal fume fever).

Silica, amorphous  Acute overexposures: Can cause dryness of eyes, nose and upper respiratory tract.

Iron oxide  Chronic overexposures: Can cause benign lung disease (siderosis). Ingestion: Can cause irritation of gastrointestinal tract, bleeding, changes in the pH of the body fluids (metabolic acidosis) and liver damage.

Alumina (aluminum oxide)  Low health risk by inhalation. Generally considered to be biologically inert.

Welding, plasma arc cutting, and arc spray metalizing can generate ozone. Ozone  Can cause irritation of eyes, nose and upper respiratory tract. Acute overexposures: Can cause shortness of breath, tightness of chest, headache, cough, nausea and narrowing of airways. Effects are reversible on cessation of exposure. Acute overexposures (high concentrations): Can cause respiratory distress, respiratory tract damage, bleeding and the accumulation of fluid in the lungs (pulmonary edema). Effects can be delayed up to 1-2 hours. Additional information: Studies with experimental animals by inhalation have found genetic damage, reproductive harm, blood cell damage, lung damage and death.

Welding fumes  IARC/NTP: Listed as possibly carcinogenic to humans by IARC (Group 2B)*. Additional Information: In one study, occupational asthma was associated with exposures to fumes from aluminum welding.

Combustion of the coatings can generate Hydrogen chloride or Hydrogen fluoride gases.

Hydrogen chloride gas  Can cause severe irritation and corrosive burns of eyes, skin and upper respiratory tract. Acute overexposures: Can cause the accumulation of fluid in the lungs (pulmonary edema).

Hydrogen fluoride gas  Can cause severe irritation of eyes, mucous membranes, skin and respiratory tract. Acute overexposures: Can cause cough, shock, the accumulation of fluid in the lungs (pulmonary edema) and death. Effects can be delayed up to 24 hours.

Acute Toxicity of Ingredients/-formed Compounds
A: General Product Information  No information available for product.
B: Component Analysis - LD50/LC50

Manganese (7439-95-4)  Oral LD50 Rat: 230 mg/kg
Manganese (7439-96-5)  Oral LD50 Rat: 9 g/kg
Iron (7439-89-6)  Oral LD50 Rat: 984 mg/kg
Silicon (7440-21-3)  Oral LD50 Rat: 3160 mg/kg

C: Formed Compound Toxicity - LD50s/LC50s

Alumina (non-fibrous) (1344-28-1)  Oral LD50 Rat: >5000 mg/kg
Iron oxide (1309-37-1)  Oral LD50 Rat: >10000 mg/kg

Descriptions of IARC and NTP Classifications
IARC 1: The agent is carcinogenic to humans. There is sufficient evidence that a causal relationship existed between exposure to the agent and human cancer.
IARC 2A: The agent is probably carcinogenic to humans. Generally includes agents for which there is limited evidence of carcinogenicity in humans and sufficient evidence of carcinogenicity in experimental animals.
IARC 2B: The agent is possibly carcinogenic to humans. Generally includes agents for which there is limited evidence in humans and less than sufficient evidence in experimental animals.
IARC 3: The agent is not classifiable as to its carcinogenicity to humans. Generally includes agents for which there is inadequate evidence in humans and inadequate or limited evidence in experimental animals.
IARC 4: The agent is probably not carcinogenic to humans. Generally includes agents for which there is evidence suggesting lack of carcinogenicity in humans and in experimental animals.
NTP K: Known to be a human carcinogen.
NTP RA: Reasonably anticipated to be a human carcinogen.

Notes:
(1) When "Not regulated", enter the proper freight classification, "MSDS Number", and "Product Name" on the shipping paperwork.

Canadian Controlled Products Regulation PIN: Not regulated

*** Section 15 - Regulatory Information ***

US Federal Regulations

A: General Product Information
In reference to Title VI of the Clean Air Act of 1990, this material does not contain nor was it manufactured using ozone-depleting chemicals. All electrical equipment must be suitable for use in hazardous atmospheres involving aluminum powder in accordance with 29 CFR 1910.307. The National Electrical Code, NFPA 70, contains guidelines for determining the type and design of equipment and installation that will meet this requirement.

B: Component Analysis
This material contains one or more of the following chemicals required to be identified under SARA Section 302 (40 CFR 355 Appendix A), SARA Section 313 (40 CFR 372.65) and/or CERCLA (40 CFR 302.4).

Aluminum (7429-90-5)
SARA 313: 1.0 % de minimis concentration (dust or fume only)

Manganese (7439-96-5)
SARA 313: 1.0 % de minimis concentration

Chromium (7440-47-3)
CERCLA: 5000 lb final RQ (no reporting of releases of this hazardous substance is required if the diameter of the pieces of the solid metal released is larger than 100 micrometers); 2270 kg final RQ (no reporting of releases of this hazardous substance is required if the diameter of the pieces of the solid metal released is larger than 100 micrometers)

Lead pigments (Not Available)
SARA 313: 0.1 % Supplier notification limit; 0.1 % de minimis concentration (when contained in stainless steel, brass, or bronze) (related to Lead)
CERCLA: 10 lb final RQ (no reporting of releases of this hazardous substance is required if the diameter of the pieces of the solid metal released is larger than 100 micrometers); 4.54 kg final RQ (no reporting of releases of this hazardous substance is required if the diameter of the pieces of the solid metal released is larger than 100 micrometers) (related to Lead)

SARA 311/312 Physical and Health Hazard Categories:
Immediate (acute) Health Hazard: Yes, if particulates/fumes generated during processing.
Delayed (chronic) Health Hazard: Yes, if particulates/fumes generated during processing.
Fire Hazard: No
Sudden Release of Pressure: No
Reactive: Yes, if molten
State Regulations

A: General Product Information

Pennsylvania “Special Hazardous Substance”: Chromium compounds, hexavalent.

Chemical(s) known to the State of California to cause cancer: Chromium (hexavalent compounds), Lead compounds

Chemical(s) known to the State of California to cause reproductive/developmental effects: Lead, inorganic compounds

B: Component Analysis - State

The following components appear on one or more of the following state hazardous substances lists:

The following statement(s) are provided under the California Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65):

WARNING! This product contains a chemical known to the state of California to cause cancer.

WARNING! This product contains a chemical known to the state of California to cause reproductive/developmental effects.

Other Regulations

A: General Product Information
Material meets the criteria for inclusion in WHMIS Hazard Class D2A.

B: Component Analysis - WHMIS IDL

The following components are identified under the Canadian Hazardous Products Act Ingredient Disclosure List:

<table>

Inventory information

MITI Inventory: Pure metals are not specifically listed by CAS or MITI number on the MITI Inventory. However, the class of compounds for each of these metals is listed.

MSDS History

Original: April 17, 2000
Supersedes: January 25, 2005
Revised: June 9, 2008
Material Safety Data Sheet

Product Name: COIL AND SHEET - BARE AND COATED
ID: 1088

MSDS Status
06/09/2008: Reviewed on a periodic basis in accordance with Alcoa policy. Changes in Sections 1, 2, 3, 4, 5, 7, 8, 10, 11, 12, 13, 14 and 15.
01/25/2005: Changes in Sections 1, 3, 4, 9 and 15.
02/26/2004: Reviewed on a periodic basis in accordance with Alcoa policy. Changes in Sections 3 and 8.
04/17/2000: New MSDS

WARNING

Physical Hazards: Small chips, fine turnings and dust may ignite readily. Explosion potential may be present when: (1) dusts or fines are dispersed in the air, (2) fines, dust or molten aluminum are in contact with certain metal oxides (i.e., rust) or (3) chips, fines, dust or molten aluminum are in contact with water or moisture. Combustion of coatings may generate toxic and irritating gases.

Health Hazards: Health effects generally expected in cases of overexposures:

EYES: Dust or fume from processing: Can cause irritation.

SKIN: Dust or fume from processing: Can cause irritation.

INHALATION: Health effects from mechanical processing (e.g., cutting, grinding):
- Can cause irritation of upper respiratory tract. *Chronic overexposures*: Can cause scarring of the lungs (pulmonary fibrosis), central nervous system damage, secondary Parkinson's disease and reproductive harm. *Additional health effects from elevated temperature processing (e.g., welding, melting):* *Acute overexposures*: Can cause the accumulation of fluid in the lungs (pulmonary edema), severe irritation of the respiratory tract, nausea, fever, chills, shortness of breath and malaise (metal fume fever). *Chronic overexposures*: Can cause respiratory sensitization, the accumulation of fluid in the lungs (pulmonary edema), lung cancer and kidney damage. Effects may be delayed up to 24 hours.

WARNING: Chromium (Hexavalent compounds), Lead and lead compounds are chemicals known to the state of California to cause cancer. Lead is known to the State of California to cause reproductive/developmental effects. (Proposition 65).

Precautions: Use with adequate ventilation. Avoid generating dust. Wear appropriate eye and skin protection to prevent any injury. Wear appropriate respiratory protection (N100, acid gas if hydrogen chloride or hydrogen fluoride is generated) if concentrations exceed the permissible limits.

First aid (dust or fume from processing): EYES: Flush eyes with plenty of water or saline for at least 15 minutes. Consult a physician. SKIN: Wash with soap and water for at least 15 minutes. Consult a physician if irritation persists. INHALATION: Remove to fresh air. If unconscious or severely injured, check for clear airway, breathing, and presence of pulse. Provide CPR if there is no pulse or respiration. Consult a physician.

In case of fire: Use Class D or dry sand on fines; use coarse water spray on chips, turnings. DO NOT USE: Halogenated agents on small chips, dusts or fines, water around molten metal. These agents will react with the burning material.

See Alcoa Material Safety Data Sheet No. 1088 for more information about use and disposal.

Emergency Phone: (412) 553-4001.

INGREDIENTS: CAS NUMBERS:
Aluminum (7429-90-5) Silicon (7440-21-3)
Magnesium (7439-95-4) Chromium (7440-47-3)
Manganese (7439-96-5) Coatings* --
Iron (7439-89-6) Lead pigments --

* Include vinyl, epoxy, polyester, siliconized polyester, acrylic, fluorocarbons, polyurethane, petrolatum, chromium conversion and titanium conversion. Some coatings contain lead pigments.
